Introduction

The Wisconsin (WI) prison population has grown substantially over the last 25 years, more than tripling from 1990 to 2014. To present a complete picture of how the prison population has changed, admissions to prison, point-in-time prison population counts, and releases from prison are included in this report series. All three types of data are important to consider when examining changes in the prison population. For example, an increase in the number of releases in one year may be explained by a similar increase in the number of admissions several years prior. Or an increase in the overall prison population may be related to an increase in admissions and a simultaneous decrease in releases. While there are many other factors that likely contribute to these changes, examining multiple facets of the prison population is a valuable method for tracking and anticipating changes in the number and types of inmates that the WI Department of Corrections (DOC) is and will be responsible for. Tracking various aspects of the prison population allows the Department to make appropriate changes as needed to its facilities and policies. For example, accommodating a growing number of older inmates. The data presented in this report has been validated to provide measures that reflect the changing prison population as accurately as possible.

Prison Facilities

There are 37 correctional institutions and centers throughout the state of WI. The Division of Adult Institutions (DAI) oversees 19 adult correctional facilities and is responsible for the administration of the WI Correctional Center System (WCCS), which encompasses 17 Correctional Centers. Additionally, this report includes data regarding inmates at the WI Resource Center (WRC) which is administered by the WI Department of Health Services (DHS) in partnership with the WI Department of Corrections. WRC is a specialized inpatient mental health facility established as a prison under s. 46.056, WI Statutes. The WI DOC uses three security levels for its institutions: maximum, medium, and minimum. There are four different custody levels assigned to individual inmates: maximum, medium, minimum, and minimum community. Inmate custody levels are determined by a classification system that evaluates inmates by established criteria. An inmate's custody level may be different than the security level of the facility that he or she is placed in. Facilities vary by the design and features of the prison, including: physical plant design, level of staffing, and operating procedures. A maximum security facility has the most restrictive level of confinement and a minimum security facility has the least restrictive. Except for inmates awaiting transfers, and in situations where there is a declared emergency or disturbance at an institution, an inmate's custody classification shall be no greater than the designated security classification of the institution in which the inmate is placed. All security levels offer a wide variety of treatment, education, and work programs.

Maximum Security facilities have the highest level of security. These facilities may have features that include but are not limited to: fortified walls, double restrictive fencing, lethal stun fence, towers, and perimeter vehicle patrols. Housing mostly consists of multiple- and single-occupant cells. They have the highest staff-to-inmate ratio, and inmate movement is closely supervised. Cell opening and closing is controlled by security staff. These facilities can house all levels of inmate classification.

Medium Security facilities have perimeter fencing, motor vehicle patrol, and may have towers. Housing mostly consists of multiple occupant cells along with secure barracks units. Each housing unit is locked at night (most inmates are able to open and close their own cells, some are controlled by staff) with a security staff providing direct supervision over the inmates and sleeping area. Movement of inmates is less restrictive than in a maximum security prison.

Minimum Security facilities have the least restrictive level of security. Facilities may have single perimeter fencing (currently three do), while the rest do not have fencing. They do not have towers and most do not have motor

vehicle patrols. Housing consists of single, double, and multiple occupant cells along with secure barracks units. Minimum custody inmates at minimum security prisons often have job placements with civilian employers (minimum community custody) or participate in community-based work assignments. There is more freedom of inmate movement within these prisons and inmates may have different (more) privileges and responsibilities than at a medium or maximum security facility.

Prison and Correctional Center Characteristics

Adult Institutions	Year Opened	Security Level	Operating Capacity	12/31/2014 Inmate Population
Chippewa Valley Correctional Treatment Facility	2004	Minimum	466	454
Columbia Correctional Institution	1986	Maximum	830	833
Dodge Correctional Institution	1978	Maximum	1,573	1,577
Fox Lake Correctional Institution	1962	Medium	1,344	1,321
Green Bay Correctional Institution	1898	Maximum	1,091	1,069
Jackson Correctional Institution	1996	Medium	995	989
Kettle Moraine Correctional Institution	1962	Medium	1,168	1,161

WISCONSIN PRISON POPULATION

Over the past couple of years the Wisconsin Department of Corrections (WI DOC) has been moving forward with an effort to take very large and complex datasets, validate them, analyze them, and then present information in an understandable form that accurately reflects trends and patterns of the adult prison population. Information presented in this report represents point-in-time prison populations over the last 15 to 25 years. Point-in-time “snapshots” of the prison population were taken each year from 1990 to 2014 (on June 30th and December 31st). The report does not include offenders under supervision of the Division of Community Corrections held in a Division of Adult Institution facility as a temporary hold.

Note: Point-in-time numbers exclude temporary holds.

Overall Point-in-Time Prison Populations (June 1990-December 2014): The graph above displays point-in-time “snapshots” of the prison population from June 1990 to December 2014 (with a point-in-time presented for June 30th and December 31st of each year). See Appendix B, [Table 1](#), for a complete table of point-in-time numbers, [Table 2](#), for a complete table of point-in-time numbers by gender.

	1990	% Change 1990-2000	2000	% Change 2000-2014	2014
Overall Population	7,332	+177.8%	20,367	+9.1%	22,215
Male	6,990	+172.1%	19,023	+9.7%	20,871
Female	342	+293.0%	1,344	0.0%	1,344

2014 WI Prison End-of-Year Population Snapshot

- 38 was the average age
- 94% were male
- 41% were Black, 55% were White, and 9% report Hispanic or Latino ethnicity
- 40% of males and 43% of females report having dependent children
- 7% report having military experience
- 33% of males and 77% of females had a mental health condition
- 67% had a violent crime as their most serious offense
- 35% had five or more years left to serve in prison

Race

Since 1990, White inmates have made up the largest proportion of the prison population at every point-in-time except during the years 1998 and 1999.

Race and Ethnicity:

Race	Male		Female	
	2000	2014	2000	2014
White	48.8%	53.6%	47.5%	69.8%
Black	47.4%	42.0%	48.4%	23.2%
American Indian/Alaskan Native	3.0%	3.2%	3.6%	6.0%
Asian or Pacific Islander	0.7%	1.0%	0.4%	1.0%
Did Not Report	0.1%	0.1%	0.2%	0.0%
Ethnicity*				
Hispanic or Latino	7.6%	9.5%	4.9%	3.1%

*Inmates in all race categories can identify themselves as Hispanic or Latino.

Since 2000 ...

- The overall population of **White** inmates increased by 12.1% (5.9 percentage points) while the percentage of **Black** inmates decreased by 13.9% (6.6 percentage points).

See Appendix B, [Table 3](#) for a complete table of point-in-time numbers by race, and [Table 4](#) for a complete table of point-in-time numbers by ethnicity.

Age

From 1990 to 2014 the percentage of inmates in WI prisons ages 50 to 54 increased by 323%. At the time of this report, there were over 4,000 inmates in WI prisons over the age of 50. The percentage of 20- to 24-year-olds decreased by 46.3% between 1990 and 2014 (10.7 percentage points). See Appendix B, [Table 5](#), for a complete table of point-in-time numbers by age.

Note: Point-in-time numbers exclude temporary holds.

The percentage of older inmates in WI DOC prisons has increased significantly over the past 15 years. Shown in the graph are the percentage of inmates aged 50 and older from June 2000 to December 2014.

Note: Point-in-time numbers exclude temporary holds.

The percentage of inmates **50 and older** more than **tripled** from 2000 to 2014, increasing from **6%** to **18.2%** of the total prison population.

Most Serious Offense (June 2000-December 2014)

Many offenders are convicted of multiple offenses. For this reason, an offender’s most serious offense was selected for this analysis. Offenses fall into four categories (in order of seriousness): violent, property, drug, and public order offenses. See Appendix B, [Table 6](#), for a complete table of point-in-time numbers by most serious offense.

Note: Point-in-time numbers exclude temporary holds & unknown sentence data.

Most Serious Offense on December 31, 2014

Most Common Offenses in Each Category on December 31, 2014

Violent Offense		Property Offense		Drug Offense		Public Order Offense	
Statute Description	N	Statute Description	N	Statute Description	N	Statute Description	N
Armed Robbery	1,809	Burglary-Building or Dwelling	1,665	Manufacture/Deliver Heroin (<3g)	244	Operating while Under the Influence	1,063
First Degree Intentional Homicide	1,504	Theft-Moveable Property	407	Possession of Narcotic Drugs	189	Possession of Firearm by Felon	276
Second Degree Sexual Assault of Child	1,396	Misappropriate ID Info-Obtain Money	209	Manufacture/Deliver Cocaine (<=1g)	129	Possession of Child Pornography	199
First Degree Sexual Assault of Child	1,252	Retail Theft-Intentionally Take	159	Possession of THC (2nd+ Offense)	105	Failure to Support Child (120 Days+)	97
Robbery with Use of Force	577	Forgery-Uttering	155	Manufacture/Deliver Cocaine (>1-5g)	94	Bail Jumping-Felony	76

* Point-in-time numbers exclude temporary holds.

Historical- Most Serious Offense

At the end of 2014, 67.2% of the inmate population's most serious offense was violent. When looking at the entire offense history of each inmate, the percentage of the population who ever committed a violent offense increased from 67.2% to 71.8%, or 4.6 percentage points.

The graph below illustrates the most serious offenses of those inmates present in an institution on December 31, 2014 who did not have a violent offense as their most serious offense at that time, but who had been violent previously. Property offenses accounted for 38 percent of these offenses, 32 percent fell into the public order offense category, and 30 percent were classified as a drug offense.

Inmates with any Drug, Sex or Operating While Indoxicated (OWI) Offense (June 2000-December 2014):

In the graphs below, an inmate is included in one or more of the three offense categories if any of his or her active offenses (at the time of admission or at the point-in-time that he or she was in prison) was a Drug, Sex, or OWI offense. See Appendix B, [Table 7](#), for a complete table of point-in-time numbers by drug, sex, or OWI Offense.

Note: Point-in-time numbers exclude temporary holds and are reported from 2000 to 2014.

Drug Offenders

- The percentage of inmates in prison with any active drug offense peaked at 23% in 2004 and has decreased slightly to 19.2% at the end of 2014.

Sex Offenders

- The percentage of inmates with any active sex offense increased slightly from 20.1% in 2000 to 25.2% in 2014.

OWI Offenders

- There was a significant increase in OWI inmates from 2.7% in 2000 to 9.2% in 2014.

Time Left to Serve (June 1990-December 2014):

Time left to serve is calculated as the time between each six-month point-in-time date and the actual or projected end date of an inmate’s incarceration portion of his or her sentence. While the time left to serve analysis does not represent the overall sentence an inmate must serve in prison, it offers one possible explanation for changes in the prison population over time - such as why the general inmate population is getting older. See Appendix B, [Table 8](#), for a complete table of point-in-time numbers by time left to serve.

Note: Point-in-time numbers exclude temporary holds & unknown sentence data.

Percent Change in Time Left to Serve 2000-2014

- The percentage of inmates with **four or fewer** years to serve has **decreased by over 50%**.
- The percentage of inmates with **five or more** years left to serve has **increased by over 25%**.

Note: Point-in-time numbers exclude temporary holds & unknown sentence data.

Appendix A

Methodology

Point-in-Time Prison Population

The point-in-time prison population data presented in this report describe inmates who were physically present in a WI DOC prison; inmates occupying contract beds in county jails, mental health facilities, other state prisons, interstate compact inmates serving another state's sentence or a federal sentence in a WI facility. It also includes inmates who are not physically in a WI DOC facility at that point-in-time but who have a bed held for them while they are out to court or at the hospital on that day. These population counts do not include interstate compact inmates who are serving WI sentences but who are physically incarcerated in other state or federal prisons. Additionally, inmates with adult convictions who are being housed in a juvenile facility are not included in point-in-time prison population counts.

Point-in-Time Prison Population: Most Serious Offense Analysis

Offense categories were based on the Association of State Correctional Administrators (ASCA) Performance-Based Measures System (PBMS) standards. While the ASCA standards were followed as closely as possible in the categorization of offenses, supplementary rules were developed to aid in categorizing statutes that did not clearly fit into one category or another. Offense categorization methodology is available upon request.

Offenses committed by WI DOC inmates were categorized into four offense categories: violent offenses, property offenses, drug offenses, and public order offenses. Offenses displayed in the graphs and tables represent an inmate's most serious offense. The most serious offense was selected based on the order of the categories listed above, with violent offenses as the most serious, and public order offenses as the least serious.

Over the years statutes have been passed that have changed the composition of the WI prison population. For example, 2009 Wisconsin Act 100 was signed into law, increasing the penalty for a fourth Operating While Intoxicated (OWI) conviction to a felony when a prior conviction had occurred within the five years prior. It also made an OWI offense a misdemeanor if it occurred with a minor child (under the age of 16) in the vehicle, and it required the installation of an ignition interlock device for first-time offenders with a blood-alcohol level of more than .15, and for all repeat offenders. OWI convictions fall under the Public Order Offense category.

For the most serious offense analysis inmates were removed from each point-in-time if they did not have an active offense or if they did not have a valid end date for their period of incarceration (see below for more details on calculation of end dates). Occasionally an inmate appeared to not have any active offenses at a particular point-in-time due to data entry lag. For example, an inmate admitted on December 9, 2003 may have been missing an offense for the December 31, 2003 point-in-time because the judgment of conviction was not yet entered by that date. Although the offense exists in the DOC data system, due to the logic used to accurately align offenses with points in time those offenses were not included here.

Additionally, the most serious offense analysis *excluded* inmates in prison at any of the points in time for Alternative to Revocation (ATR), erroneous admissions, pending revocation hearings, and interstate compact offenders (with no WI sentence), as these inmates were not serving time in prison for the confinement portion of a WI sentence.

Point-in-Time Prison Population with Any Drug, Sex, or OWI Offense

An inmate is included in one or more of the three offense categories if any of his or her active offenses (at the time of admission or at the point-in-time that he or she was in prison) was a Drug, Sex, or OWI offense. This means that an inmate could be counted in each of the three categories, if he or she had an active drug offense, sex offense, and OWI offense at admission or when in prison. The category that an inmate is included in *does not necessarily* indicate what the inmate's most serious offense was.

Point-in-Time Prison Population: Time Left to Serve Analysis

For the time left to serve analysis inmates were removed from each point-in-time if they did not have an active offense documented or if they did not have a valid end date for their period of incarceration. Time left to serve was calculated as the time between each point-in-time date and the actual or projected end date of an inmate's incarceration portion of his or her sentence. If at the time of this report the inmate had been released, the release date was used as the end date. If the inmate had not been released, the mandatory release or extended supervision date (which is the date the inmate should be released from prison to begin the supervision portion of his or her sentence) was used. If a valid mandatory release date was not recorded, the inmate's maximum discharge date was used to determine his or her projected release from prison. Due to timing of data entry, some inmates did not have a valid mandatory release or extended supervision or maximum discharge date associated with a particular point-in-time. This does not mean that they did not have one of those dates recorded in the data system, rather that we were unable to pull the appropriate one that should have been associated with that point-in-time date due to the timing of the data entry. If a valid mandatory release or extended supervision and maximum discharge date could not be selected, and no release date existed, the inmate was removed from the data set for that point-in-time for both the offense and time left to serve analyses.

Additionally, the time left to serve analysis *excluded* inmates in prison at any of the points in time for ATRs, erroneous admissions, pending revocation hearings, and interstate compact offenders (with no WI sentence) as these inmates were not serving time in prison for the confinement portion of a WI sentence.

Appendix B

Table 1. Total Prison Point-in-Time Population: 6/30/1990-12/31/2014

Point-in-Time (PiT)	Total PiT N	Point-in-Time (PiT)	Total PiT N
