

MEDICALLY ASSISTED TREATMENT:

**04 REFERRAL PROCESS**

1. For clients releasing from prison, see the "Pre-Release Planning" section of ECRM. The agent shall work with the institution social worker to facilitate participation in MAT as screening indicates in connection with the Pre-Release Planning process.
2. For clients on community supervision, screening for opioid history is conducted at intake, in conjunction with a Supervision Level Review, or during the course of investigating a violation. See those sections of ECRM for further details concerning screening. If screening comes back affirmative for opioid use history, or there is a history of opioid use indicated from other sources, discuss with the client options for MAT participation.
